

04. Routes Defining

- ☐ create individual route pages
- ☐ Import all pages to index.js page
- ☐ from index.js we will redirect all the users related routes to user.routes.js
- ☐ for all the routes of users it will go through
 1. Validate Middleware where we will pass the data table creation schema
 2. User Controller creation method
 - ▼ User service need to call from User Controller
 - User Model need to call from User Service
- ☐ Then We need to go to Postman
 1. provide all data to create a user

```
{
  "name": "Fahmidul Karim",
  "email" : "Fama@gmail.com",
  "password" : "Abc@124#",
  "gender": "male",
  "bloodGroup" : "a+",
  "age" : 56,
  "city" : "Dhaka",
  "postcode" : 1212
}
```

1. select method then select environment
2. url should be <http://localhost:5000/users>
